Summary

BCA (Data Science) student and Data Science Intern at Regex Software with 9+ months of hands-on experience in Python, SQL, Flask, and Pandas. Skilled in building MySQL-backed backend systems with relational database design (foreign keys, JOIN queries), developing REST API endpoints using Flask, and delivering end-to-end data analysis and ETL pipelines. Seeking a fresher role as a Python Developer, Backend Developer, or Data Analyst to contribute to impactful, data-driven products.

Technical Skills

Languages: Python, C, SQL, HTML5

Backend / Web: Flask, REST API Design, CRUD Operations

Databases: MySQL, Relational Database Design, JOIN Queries (INNER, LEFT, RIGHT), Foreign Keys, ETL, Aggregations

Data & Analysis: Pandas, NumPy, Matplotlib, Seaborn, Plotly, EDA, Data Preprocessing, Data Visualization

Machine Learning: scikit-learn, Label Encoding, StandardScaler, MinMaxScaler, Feature Engineering, Missing Value Handling

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Google Colab, LeetCode (50+ problems)

Concepts: OOP, Data Structures & Algorithms, Prompt Engineering, Database Management Systems (DBMS)

Projects

Booking Management System | Python, Flask, MySQL

2025

- Designed a normalized relational MySQL database schema with multiple tables linked via foreign key constraints to manage bookings, users, and resources.
- Built RESTful backend API endpoints using Flask to handle full CRUD operations — create, read, update, and delete — for booking records and user data.
- Wrote optimized SQL JOIN queries (INNER JOIN, LEFT JOIN) to retrieve booking details with associated user and resource data across related tables.
- Implemented server-side input validation and error handling to enforce data integrity and prevent duplicate or conflicting bookings.

User Feedback System | Python, Flask, MySQL

2025

- Built a feedback collection web application with a relational database design enforcing referential integrity through foreign key constraints between users and feedback tables.
- Used SQL JOIN operations to aggregate feedback entries with user profile data, enabling structured, queryable reporting across multiple related tables.
- Exposed REST API endpoints via Flask to accept, store, and retrieve structured feedback data, handling JSON request/response cycles end-to-end.
- Automated feedback summarization using SQL aggregation functions (GROUP BY, AVG, COUNT) to generate grouped rating and response-count reports.

Data Analytics & EDA Pipeline | Python, Pandas, Plotly, scikit-learn

2025

- Built end-to-end ETL pipelines to ingest, clean, and transform raw CSV datasets using Pandas — handling null values, encoding categoricals, and removing outliers.
- Applied StandardScaler and MinMaxScaler for feature normalization; used label encoding and categorical mapping to produce ML-ready datasets.
- Performed EDA on Employee Attrition (1,400+ records), COVID-19, and Titanic datasets — uncovering patterns in age, department, and gender using univariate and bivariate analysis.

- Built interactive Plotly dashboards (heatmaps, donut charts, distribution plots) and trained classification models with scikit-learn achieving measurable accuracy improvements.

Responsive Portfolio Website | HTML5, CSS3

2024

- Designed and deployed a fully responsive personal portfolio website showcasing projects, technical skills, and certifications.
- Structured semantic HTML5 and CSS3 layouts to ensure compatibility across screen sizes and browsers.

Experience

REGex Software Services

Jaipur, Rajasthan

Data Science Intern

Sep 2025 – Present (9 months)

- Engineered ML-ready datasets from raw CSVs using Pandas — null imputation, label encoding, and categorical feature mapping — delivering clean data pipelines for downstream analysis.
- Performed end-to-end EDA on COVID-19 and Titanic datasets using Pandas and NumPy, uncovering demographic and geographic patterns through univariate and bivariate analysis.
- Developed interactive dashboards using Matplotlib, Seaborn, and Plotly — heatmaps, distribution plots, and donut charts — to present data insights clearly to stakeholders.
- Designed prompt-engineering workflows to automate repetitive data reporting tasks, reducing manual effort by 60% through structured AI instruction pipelines.

Education

Commerce College Jaipur

Jaipur, Rajasthan

Bachelor of Computer Applications (BCA) — Data Science

2023 – 2026 (Expected)

Relevant Coursework: Data Structures & Algorithms, DBMS, Python, Machine Learning, Web Technologies, Statistics

Surendra Public School

Jaipur, Rajasthan

Higher Secondary Certificate (12th) — Commerce

Completed 2023

Certifications & Achievements

SQL (Basic) Certification | HackerRank | 2024

SQL Certification — Advanced Querying | HackerRank | 2024

AI Tools Workshop | Artificial Intelligence & Automation | 2024

Google Data Analytics Certificate | Google / Coursera (In Progress) | 2025

Kaggle: Python, Pandas & Data Viz | Kaggle (In Progress) | 2025

- Solved 50+ problems on LeetCode, strengthening SQL querying and DSA skills in Python and C.
- Documenting a structured day-by-day Machine Learning course publicly on GitHub and LinkedIn.
